Watch out, here comes a pair of jaws that will rip your papers to bits and pieces! Three-inch kami is particularly at risk, but even six-inch foil has been devoured on more than one occasion.

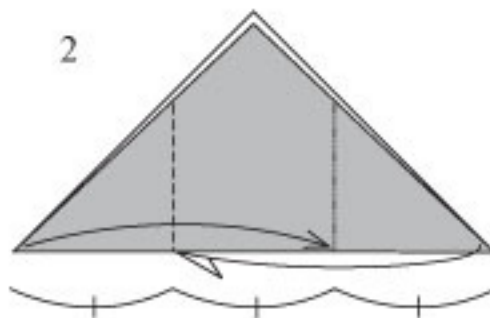

1

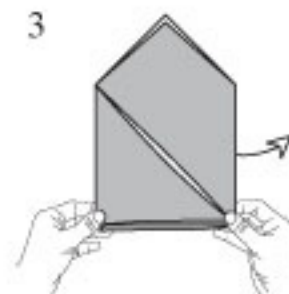

Begin with a very large sheet of waterproof paper, white side up. Valley-fold in half diagonally.

2

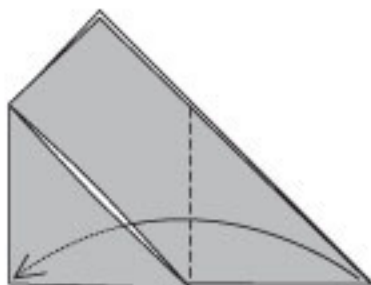

Divide the base of the model into thirds by folding the left side in front and the right side to the back.

3

Fiddle with the folds until the thirds are exact. Then unfold the back flap.

4

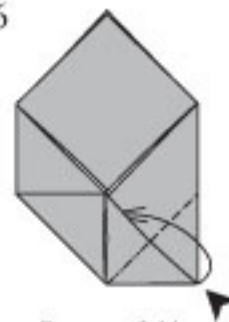

Valley-fold, inserting the flap into the pocket.

5

Valley-fold on the left. Valley-fold and unfold on the right.

6

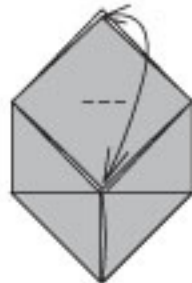

Reverse-fold.

7

Valley-fold, inserting the flap into the pocket.

8

On the front layer, make the indicated valley pinch.

9

On the front layer, make the indicated valley pinch.

10

Valley-fold one layer.
